EXCELLOFIZZ

Instructions: *Excellofizz usage:*

- Use 1 – 2 Excellofizz pucks for every 10 square feet of plant area, once per day.
- React each Excellofizz puck with 100ml (3.25 fl.oz.) of room temperature water.
- If there is still some mass to the puck remaining after 5 hours, you may add a little more water to further dissolve.
- Place the Excellofizz pucks so that the reaction does not splatter on the leaves.
- The container should be placed in a position above the plants where the released CO2 will be circulated around the leaves within your greenhouse.
Note: CO2 is heavier than air
- Restrict venting of your greenhouse as much as possible especially during the beginning of the reaction period. This will increase the effectiveness of Excellofizz by allowing CO2 to be absorbed by the plant tissue.
- Pucks may be broken into pieces for smaller areas.
- The container can be washed out daily.

Complimentary Supernatural products to maximize the use of Supernatural Excellofizz:

- Supernatural Gro Terra
- Supernatural Bloom Terra
- Supernatural Superboost
- Supernatural Bud Blaster
- Supernatural Super Leach
- Supernatural Quality Cure
- Supernatural Ultimate Thrive
- Supernatural Green Stay
- Supernatural Grow Pots
- Supernatural Root Burst Powder
- Supernatural Bloom Aqua
- Supernatural Gro Aqua

SUPERNATURAL

BRAND

EXCELLOFIZZ

What: *Excellofizz will do for my plants?*

- Excellofizz will greatly increase plant mass and fruit load.

How: Excellofizz releases CO2 into your greenhouse atmosphere allowing leafy plant tissue to quickly and easily absorb carbon.

Why: Plants are made up of two basic components: water and carbon. Carbon is the building block for all plants.

Benefits: *Excellofizz as a CO2 producer:*

- Excellofizz is safe to use around people and pets and will not raise the CO2 to dangerous levels.
- Excellofizz is economical for small to medium size greenhouses. Requires no expensive dispensing or monitoring equipment.
- Excellofizz will not add heat or moisture to your greenhouse. In fact it will remove some heat and moisture.
- Excellofizz contains pure natural environmentally friendly ingredients that can be safely disposed of.
- Excellofizz is simple to use, just add water to activate.
- Excellofizz releases a refreshing fragrance of eucalyptus which absorbs odors and may deter insects.
- Excellofizz is available in a 15 puck or 50 puck containers.

When: *Excellofizz is used:*

- Excellofizz is to be reacted at least one hour into the photoperiod allowing enough time for the stomata in the leaf tissue to open. This gives the plant the ability to begin to absorb carbon.
- Excellofizz pucks will react approximately 5 hours into the photoperiod.
- Excellofizz is to be used through the vegetative stage and three weeks into the flowering.
