

Simple User Instructions SPC

The new electronic SPC for accurate climate control in your grow room.
The SPC gives you the possibility to simply and automatically control the inlet- and exhaustpressure in your grow room and maintain a constant temperature.
You don't need to adjust the fans individually. The SPC does that for you automatically.
So you never have excess pressure levels!
Connect the intake- and exhaustfan plugs to the powersockets optionally.
The SPC determines in and out!

With **Knob 4** you set the desired temperature.
The SPC will see to it that this will be the temperature of the grow room.
Advice: 30 degrees C.

The temperature sensor has already been connected and is ready.
